

☆ STAR'S FIELD WORK #1 ☆

What Is Sunshine?

Color the adventure. Read Star's story.
Then go outside and investigate!

☆ STAR is a

Guardian of Gathered Sunshine.

But have you ever wondered how you
gather sunshine?

Star can't scoop it into a bucket.

A bee can't carry a sunbeam home.

Instead, plants catch sunlight with their
leaves and use its energy to grow. Flowers
make sweet nectar. Bees visit the flowers,
gather the nectar, and carry it back to
the hive.

There, the bees turn it into honey.

So when Star calls honey
gathered sunshine, there's a little
science hiding inside the magic.

THINK ABOUT IT

Find a flower outside.

What clues can you
find that tell you an
insect has visited it?

Look closely. You might spot
pollen, a bee, a beetle, a butterfly—
or something you weren't expecting!

Every Star

has a story.

Follow the QR code
to see what Star and
the bees discovered!
